Step Motor (Servo/24 VDC)

Servo Motor (24 VDC)

p. 635

AC Servo Motor

p. 644, 646

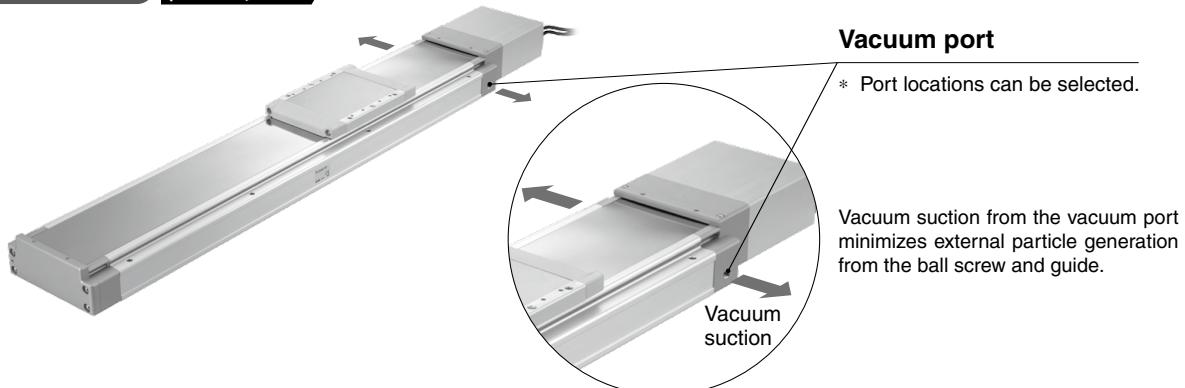

High Rigidity Slider Type

Ball Screw Drive/11-LEJS Series

AC Servo Motor

p. 657, 659

Support Guide/11-LEFG Series p. 651

The support guide was designed to support workpieces with significant overhang.

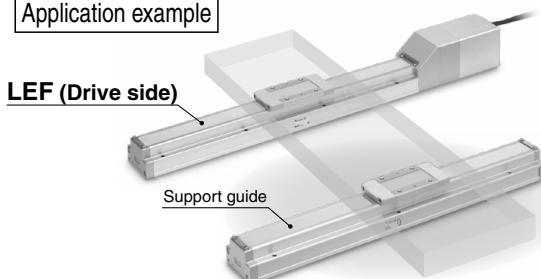

- As the dimensions are the same as the LEF series body, installation is simple and contributes to a reduction in installation and assembly labor.
- The standard-equipped seal bands prevent grease from splashing and external foreign matter from entering.

⚠ Caution

After installing the actuator on the drive side, align it with the support guide.

If the mounting flatness exceeds 0.1, install a floating mechanism separately on the workpiece installation surface (table).

Application example

Particle Generation Characteristics

11-LEFS Series ▶ p. 635, 644, 646

Particle Generation Measuring Method

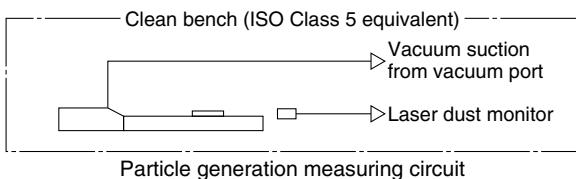

The particle generation data for SMC Clean Series are measured in the following test method.

■ Test Method (Example)

Operate the specimen that is placed in an ISO Class 5 equivalent clean bench, and measure the changes of the particle concentration over time until the number of cycles reaches the specified point.

■ Measuring Conditions

Measuring instrument	Description	Laser dust monitor (Automatic particle counter using the light scattering method)
	Minimum measurable particle diameter	0.1 µm
	Suction flow rate	28.3 L/min (ANR)
Setting conditions	Sampling time	5 min
	Interval time	55 min
	Sampling air flow	141.5 L (ANR)

■ Evaluation Method

To obtain the measured values of particle concentration, the accumulated value*¹ of particles captured every 5 minutes, by the laser dust monitor, is converted into the particle concentration in every 1 m³.

When determining particle generation grades, the 95% upper confidence limit of the average particle concentration (average value), when each specimen is operated at a specified number of cycles*² is considered.

The plots in the graphs indicate the 95% upper confidence limit of the average particle concentration of particles with a diameter within the horizontal axis range.

*1 Sampling air flow rate: Number of particles contained in 141.5 L (ANR) of air

*2 Actuator: 1 million cycles

* The particle generation characteristics (pages 633 and 634) provide a guide for selection but is not guaranteed.

* When the suction flow rate is 0 L/min, the particle concentration is measured during operation without suction.

*1 Please consult with SMC for non-standard strokes as they are produced as special orders.

*2 Refer to the body mounting example on page 166 for the mounting method.

*3 Produced upon receipt of order (Robotic cable only)

*4 The standard cable should only be used on fixed parts.

For use on moving parts, select the robotic cable.

Refer to pages 758 and 759 if only the actuator cable is required.

*5 For details on controllers/drivers and compatible motors, refer to the compatible controllers/drivers on the next page.

*6 Only available for the motor type "Step motor"

*7 When pulse signals are open collector, order the current limiting resistor (LEC-PA-R-□) on page 736 separately.

*8 When "Without controller/driver" is selected for controller/driver types, I/O cable cannot be selected. Refer to page 713 (For LECA6), page 724 (For LECP1), or page 736 (For LECPA) if I/O cable is required.

*9 When "Pulse input type" is selected for controller/driver types, pulse input usable only with differential. Only 1.5 m cables usable with open collector

*10 The DIN rail is not included. It must be ordered separately.

*11 Select "Nil" for anything other than DeviceNet™, CC-Link, or parallel input.

Select "Nil," "S," or "T" for DeviceNet™ or CC-Link.

Select "Nil," "1," "3," or "5" for parallel input.

⚠ Caution

[CE-compliant products]

① EMC compliance was tested by combining the electric actuator LEF series and the controller LEC/JXC series.

The EMC depends on the configuration of the customer's control panel and the relationship with other electrical equipment and wiring. Therefore, compliance with the EMC directive cannot be certified for SMC components incorporated into the customer's equipment under actual operating conditions. As a result, it is necessary for the customer to verify compliance with the EMC directive for the machinery and equipment as a whole.

② For the servo motor (24 VDC) specification, EMC compliance was tested by installing a noise filter set (LEC-NFA). Refer to page 713 for the noise filter set. Refer to the LECA series Operation Manual for installation.

[UL-compliant products (For the LEC series)]

When compliance with UL is required, the electric actuator and controller/driver should be used with a UL1310 Class 2 power supply.

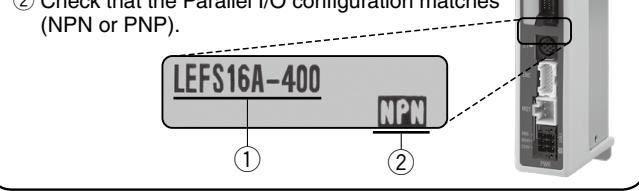

The actuator and controller/driver are sold as a package.

Confirm that the combination of the controller/driver and actuator is correct.

<Check the following before use.>

① Check the actuator label for the model number. This number should match that of the controller/driver.

② Check that the Parallel I/O configuration matches (NPN or PNP).

* Refer to the Operation Manual for using the products. Please download it via our website: https://www.smeworld.com

Dimensions: Ball Screw Drive

11-LEFS32

Positioning pin hole^{*5} (Option): Body bottom

*1 When mounting the actuator using the body mounting reference plane, set the height of the opposite surface or pin to be 3 mm or more because of round chamfering. (Recommended height 5 mm)

In addition, be aware that surfaces other than the body mounting reference plane (B dimension range) may slightly protrude from the body mounting reference plane. Be sure to provide a clearance of 1 mm or more to avoid interference with workpieces, facilities, etc.

*2 This is the distance within which the table can move when it returns to origin.

Make sure workpieces mounted on the table do not interfere with the workpieces and facilities around the table.

*3 Position after returning to origin

*4 [] for when the direction of return to origin has changed

*5 When using the body bottom positioning pin holes, do not simultaneously use the housing B bottom pin hole.

*1 Please consult with SMC for non-standard strokes as they are produced as special orders.

*2 For details, refer to the "Speed–Work Load Graph (Guide)" on page 40.

*3 The allowable speed changes according to the stroke.

*4 A reference value for correcting an error in reciprocal operation

*5 Impact resistance: No malfunction occurred when the actuator was tested with a drop tester in both an axial direction and a perpendicular direction to the lead screw. (The test was performed with the actuator in the initial state.)

Vibration resistance: No malfunction occurred in a test ranging between 45 to 2000 Hz. The test was performed in both an axial direction and a perpendicular direction to the lead screw. (The test was performed with the actuator in the initial state.)

*6 The static allowable moment is the amount of static moment which can be applied to the actuator when it is stopped.

If the product is exposed to impact or repeated load, be sure to take adequate safety measures when using the product.

*7 The amount of particle generation changes according to the operating conditions and suction flow rate. Refer to the particle generation characteristics for details.

*8 Indicates the max. power during operation (including the driver). When selecting the power supply capacity, refer to the power supply capacity in the operation manual of each driver.

*9 Only when motor option "With lock" is selected

*10 For motor type T6, T7, and T8, the resolution will change depending on the driver type.

Max. acceleration/deceleration [mm/s ²]		20000 (Refer to pages 41 to 43 for limit according to work load and duty ratio.)									
Positioning repeatability [mm]	Basic type	±0.02									
	High-precision type	±0.01									
Lost motion [mm] ^{*4}	Basic type	0.1 or less									
	High-precision type	0.05 or less									
Lead [mm]		12	6	16	8	20	10				
Impact/Vibration resistance [m/s ²] ^{*5}		50/20									
Actuation type		Ball screw (LEFS□), Ball screw + Belt (LEFS□ ^B)									
Guide type		Linear guide									
Static allowable moment ^{*6} [N·m]	Mep (Pitching)	27		46		110					
	Mey (Yawing)	27		46		110					
	Mer (Rolling)	52		101		207					
Operating temperature range [°C]		5 to 40									
Operating humidity range [%RH]		90 or less (No condensation)									
Cleanliness class ^{*7}		ISO Class 4 (ISO 14644-1) Class 10 (Fed.Std.209E)									
Grease	Ball screw /Linear guide portion	Low particle generation grease									
Motor output/Size		100 W/□40		200 W/□60		400 W/□60					
Motor type		AC servo motor (200 VAC)									
Encoder		Absolute 20-bit encoder (Resolution: 1048576 p/rev)									
Power [W] ^{*8}		Max. power 445		Max. power 725		Max. power 1275					
Type ^{*9}		Non-magnetizing lock									
Holding force [N]		131	255	197	385	330	660				
Power consumption at 20°C [W]		5.5		6		6					
Rated voltage [V]		24 VDC ^{+10%} ₀									

*1 Please consult with SMC for non-standard strokes as they are produced as special orders.

*2 For details, refer to the "Speed–Work Load Graph (Guide)" on page 48.

*3 The allowable speed changes according to the stroke.

*4 A reference value for correcting an error in reciprocal operation

*5 Impact resistance: No malfunction occurred when the actuator was tested with a drop tester in both an axial direction and a perpendicular direction to the lead screw. (The test was performed with the actuator in the initial state.)

Vibration resistance: No malfunction occurred in a test ranging between 45 to 2000 Hz. The test was performed in both an axial direction and a perpendicular direction to the lead screw. (The test was performed with the actuator in the initial state.)

*6 The static allowable moment is the amount of static moment which can be applied to the actuator when it is stopped.

If the product is exposed to impact or repeated load, be sure to take adequate safety measures when using the product.

*7 The amount of particle generation changes according to the operating conditions and suction flow rate. Refer to the particle generation characteristics for details.

*8 Indicates the max. power during operation (including the driver). When selecting the power supply capacity, refer to the power supply capacity in the operation manual of each driver.

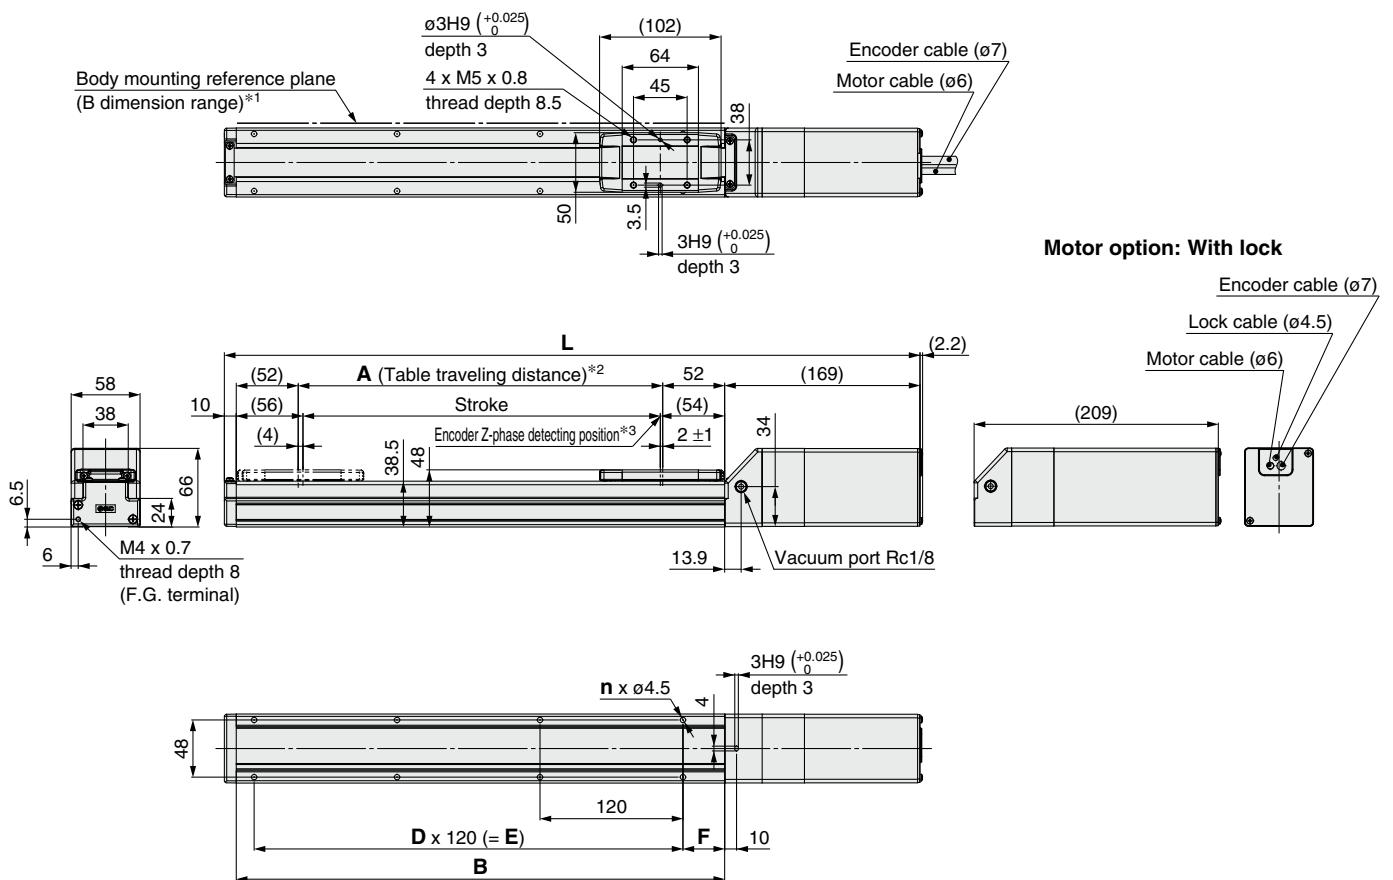

*9 Only when motor option "With lock" is selected

Dimensions: Ball Screw Drive

11-LEFS25

Positioning pin hole^{*4} (Option): Body bottom

*1 When mounting the actuator using the body mounting reference plane, set the height of the opposite surface or pin to be 3 mm or more because of round chamfering. (Recommended height 5 mm)

In addition, be aware that surfaces other than the body mounting reference plane (B dimension range) may slightly protrude from the body mounting reference plane. Be sure to provide a clearance of 1 mm or more to avoid interference with workpieces, facilities, etc.

*2 This is the distance within which the table can move when it returns to origin.

Make sure workpieces mounted on the table do not interfere with the workpieces and facilities around the table.

*3 The Z-phase first detecting position from the stroke end of the motor side

*4 When using the body bottom positioning pin holes, do not simultaneously use the housing B bottom pin hole.

Support Guide

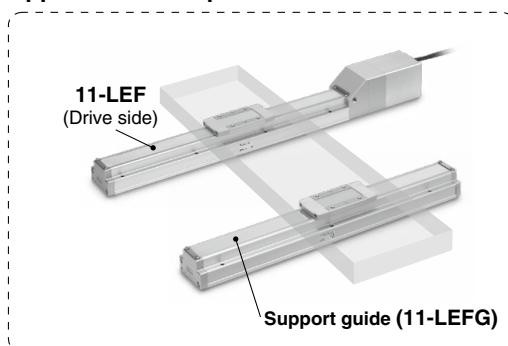

11-LEFG Series 11-LEFG16, 25, 32, 40

RoHS

The support guide was designed to support workpieces with significant overhang.

- As the dimensions are the same as the 11-LEF series body, installation is simple and contributes to a reduction in installation and assembly labor.
- The standard-equipped seal bands prevent grease from splashing and external foreign matter from entering.
