Dual Rod Cylinder

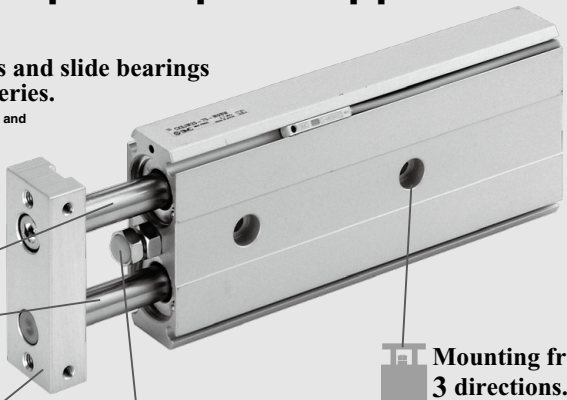
CXSJ/CXS Series

ø6, ø10, ø15, ø20, ø25, ø32

Dual rod cylinder with guide function suitable for pick & place applications.

Ball bushing bearings and slide bearings are standard for all series.

Dimensions for ball bushing bearings and slide bearings are the same.

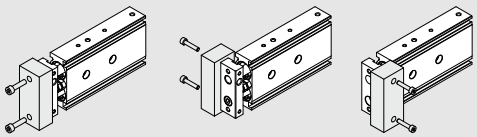


Twice the thrust Non-rotating accuracy ±0.1°

Mounting from 3 directions.

Adjustable stroke range: 0 to −5 mm

Work can be mounted on three faces.



Bottom fixing (Fixed body)	Top fixing (Through-hole fixing)
 * Except CXSJ	Side fixing	
(Fixed body A)	(Fixed body B)

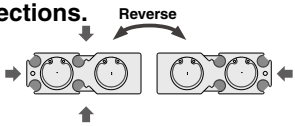
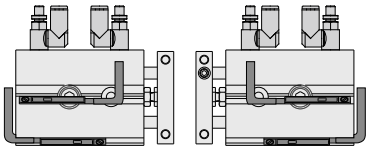
Compact type	CXSJ		(ø6, ø10 only)	(Ball bushing bearing only)		P.737
Basic type	CXS		(ø6 only)	(Ball bushing bearing only)		P.749
With air cushion	CXS					P.761
With end lock	CXS					P.768
Double rod type	CXSW					P.775

Compact Type *CXSJ Series*

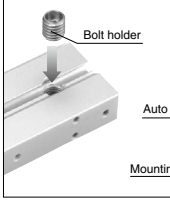
Auto switch can be installed from 3 directions.

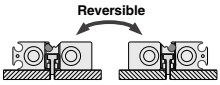


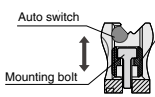
Symmetric mounting



Reverse mounting mechanism



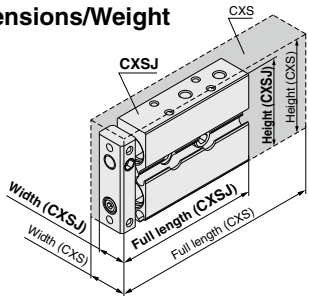




Bolt holder

Since the bolt holder is movable, the mounting bolt does not interfere with the auto switch no matter what direction it is mounted from.

Dimensions/Weight



Bore size (mm)	Series	Dimensions (mm)			Note) Weight (kg)
		Width	Height	Full length	
ø6	**CXSJ□6**	**13.4**	**32**	**42 + Stroke**	**0.057**

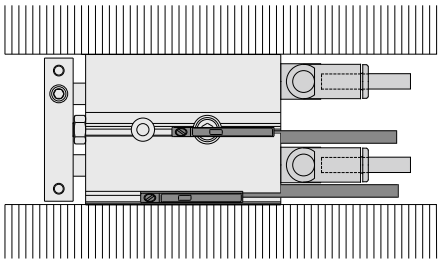
	CXS□32	38	98	112 + Stroke	1.230

Note) Slide bearing, 20 mm strokes

Axial piping available (ø6, ø10)

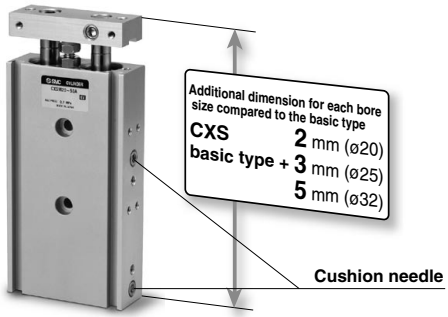


Allowable kinetic energy, allowable load, and non-rotating accuracy are equivalent to those of CXS basic type.

With air cushion

CXS Series: ø20, ø25, ø32

Air cushion only minimally adds to full length dimension, compared with the standard type cylinder.

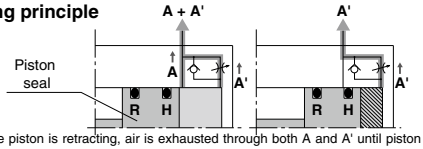


1. Improved allowable kinetic energy:
   Two to three times that of the standard type
2. Improved noise reduction:
   Reduction of more than 6 dB is possible

Unique air cushion mechanism with no cushion ring

Elimination of the cushion ring used in current type air cushions has made it possible to reduce the overall length of the cylinder while retaining all the advantages of a compact profile.

Working principle



1. When the piston is retracting, air is exhausted through both A and A' until piston seal H passes air passage A.
2. After piston seal H has passed air passage A, air is exhausted only through A'. The section marked with slanted lines becomes a cushion chamber, and an air cushion effect is achieved.
3. When air is supplied for the piston extension, the check seal opens and the piston extends with no delay.

Model Selection

⚠Caution **Theoretical output must be confirmed separately, referring to the table on page 738.**

Model Selection

Vertical Mounting

Mounting orientation				
Max. speed (mm/s)	Up to 200	Up to 400	Up to 600	Up to 800
Stroke (mm)	All strokes			
Selection graph ø6, ø10, ø15, ø20, ø25, ø32	1	2	3	4

Horizontal Mounting

Mounting orientation	 ∗ Refer to the caution notes below.									
Stroke (mm)	Up to 10		Up to 30		Up to 50		Up to 75		Up to 100	
Max. speed (mm/s)	Up to 400	Over 400	Up to 400	Over 400	Up to 400	Over 400	Up to 400	Over 400	Up to 400	Over 400
Selection graph ø6	5		6		7		14		15	
Selection graph ø10, ø15, ø20, ø25, ø32	8	9	10	11	12	13				

∗ The maximum speeds for ø6 to ø32 are: ø6, 10: up to 800 mm/s; ø15, 20: up to 700 mm/s; ø25, 32: up to 600 mm/s

⚠Caution

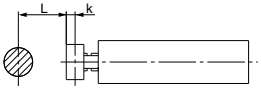
If the cylinder is horizontally mounted and the plate end does not reach the load's center of gravity, use the formula below to calculate the imaginary stroke L' that includes the distance between the load's center of gravity and the plate end. Select the graph that corresponds to the imaginary stroke L'.

Imaginary stroke L' = (Stroke) + k + L
k: Distance between the center and end of the plate

ø6	2.75 mm
ø10	4 mm
ø15	5 mm
ø20	6 mm
ø25	
ø32	8 mm

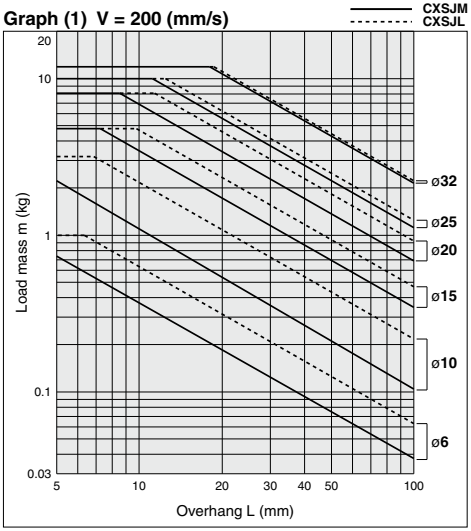
(Example)
① When using CXSJM6-10 and L = 15 mm:
Imaginary stroke L' = 10 + 2.75 + 15 = 27.75
Therefore, the graph used for your model selection should be the one for CXSJM6-30 6).

② When using CXSJL25-50 and L = 10 mm:
Imaginary stroke L' = 50 + 6 + 15 = 71
Therefore, the graph used for your model selection should be the one for CXSJL25-75 14).

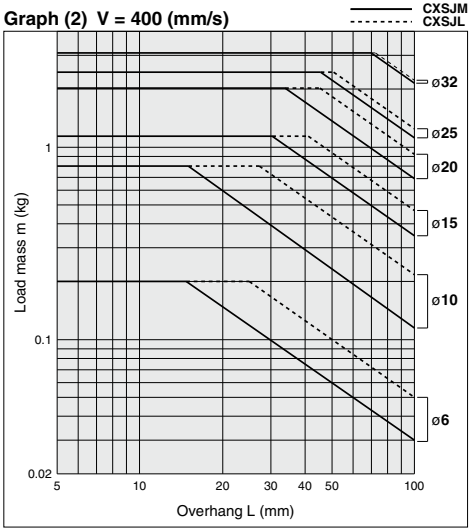


Vertical Mounting

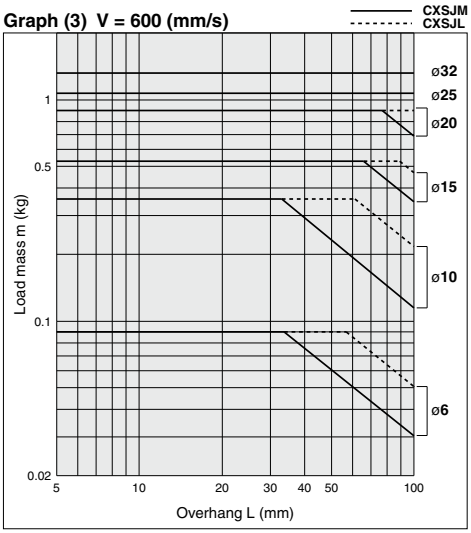
Graph (1) V = 200 (mm/s)



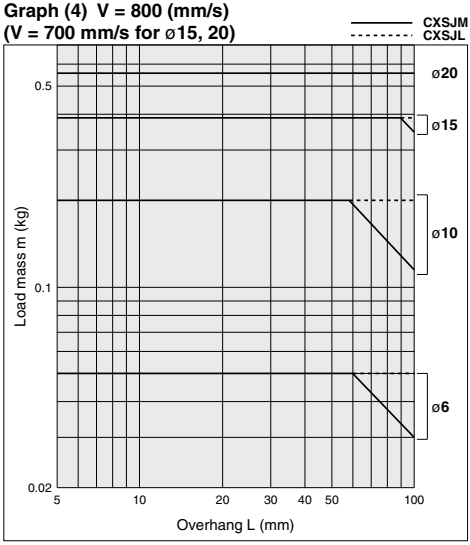
Graph (2) V = 400 (mm/s)



Graph (3) V = 600 (mm/s)



Graph (4) V = 800 (mm/s)
(V = 700 mm/s for ø15, 20)



Note) V = 700 mm/s for ø15, ø20.

Horizontal Mounting

Graph (5) Up to 10 mm stroke

Moisture Control Tube IDK Series

When operating an actuator with a small diameter and a short stroke at a high frequency, the dew condensation (water droplet) may occur inside the piping depending on the conditions. Simply connecting the moisture control tube to the actuator will prevent dew condensation from occurring. For details, refer to **the IDK series in the Best Pneumatics No. 6**.

Made to Order

Clean Series

There are two types of cylinders, relieving type and vacuum type, available for a clean room environment. The relieving type specification with the double-seal construction of the rod section allows the cylinder to channel exhaust through the relief port directly to the outside of a clean room environment. The vacuum type specification allows for the application of a vacuum on the rod section while forced exhaust of air takes place through the vacuum port to the outside of a clean room environment.

How to Order

11 – CXSJ **M** **Bore size** – **Stroke** – **Auto switch**

Bore size/Stroke

6	10, 20, 30, 40, 50
10	10, 20, 30, 40, 50

Bearing type

M	Slide bearing
L∗	Ball bushing bearing

∗ 12- series is compatible with the ball bushing bearing type only.

Clean room specifications

11	Vacuum type
12	Relieving type (with specially treated sliding parts)

Specifications

Bore size (mm)	**6**	**10**
Proof pressure	1.05 MPa	
Maximum operating pressure	0.7 MPa	
Minimum operating pressure	0.15 MPa	0.1 MPa
Ambient and fluid temperature	–10 to 60°C (No freezing)	
Piston speed	30 to 400 mm/s	
Stroke adjustable range	0 to –5 mm compared to the standard stroke	
Bearing type	Slide bearing, Ball bushing bearing	

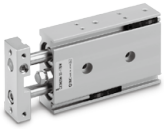
∗ Refer to "Pneumatic Clean Series" catalog (CAT.E02-23) for dimensions.

Cylinder with Stable Lubrication Function (Lube-retainer)

How to Order

CXSJ [Bearing type] [Bore size] **M** – [Stroke] – [Auto switch] [Number of auto switches]

M: Cylinder with Stable Lubrication Function (Lube-retainer)



Specifications

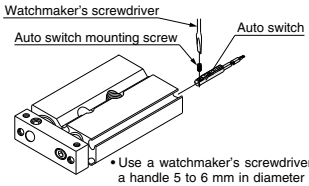
D-M9□WV	C_2	4.5	4.5	4.5	4.5
D-M9□AV	C_3	1	—	—	—

Auto Switch Mounting



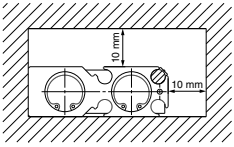
• Use a watchmaker's screwdriver with a handle 5 to 6 mm in diameter when tightening the auto switch mounting screw.

Tightening Torque of Auto Switch Mounting Screw (N·m)

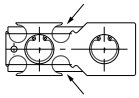
Auto switch model	Tightening torque
D-M9□(V) **D-M9□W(V)** **D-A93**	0.05 to 0.15
D-M9□A(V)	0.05 to 0.10
D-A9□(V) (Excludes the D-A93)	0.10 to 0.20

⚠Caution

① **Avoid proximity to magnetic objects.**
When magnetic substances such as iron (including flange brackets) are in close proximity to an auto switch cylinder (auto switch mounting side), be sure to provide a clearance between the magnetic substance and the cylinder body as shown in the drawing below. If the clearance is less than 10 mm, the auto switch may not function properly.



② **For CXSJ□6/10, the switch cannot be attached or detached from the plate side if the middle groove (indicated by arrows in the figure on the right) is used. (It will interfere with the bumper bolt at the end of the groove.)**



Other than the applicable auto switches listed in "How to Order," the following auto switches can be mounted.

∗ Normally closed (NC = b contact) solid state auto switches (D-M9□E(V)) are also available. For details, refer to page 1592-1.

CXSJ Series
Specific Product Precautions

Be sure to read this before handling the products.
Refer to back page 50 for Safety Instructions and pages 3 to 12 for Actuator and Auto Switch Precautions.

Mounting

⚠ Caution

1. Make sure that the surface on which the cylinder is to be mounted is flat (reference value for flatness: 0.05 or less).

Dual-rod cylinders can be mounted from 3 directions, however, make sure that the surface on which the cylinder is to be mounted is flat (reference value for flatness: 0.05 or less). Otherwise, the accuracy of the piston rod operation is not achieved, and malfunctioning can occur.

2. The piston rod must be retracted when mounting the cylinder.

Scratches or gouges in the piston rod may lead to damaged bearings and seals and cause malfunctions or air leakage.

3. CXSJ (ø6, ø10)

Adjust the bolt holder using a hexagon wrench 3 mm in width across flats so that it does not protrude from the cylinder surface (approx. 0.5 mm depth from the cylinder surface to the top of the holder). If the bolt holder is not properly adjusted, it can interfere with the switch rail, hindering the auto switch mounting. The required length of the mounting bolt for a bolt holder and mounting hole in the rod cover side varies depending on the bearing surface position for the mounting bolt. Refer to dimensions L_1 and L_2 provided below to select the appropriate mounting bolt length.

	L_1 (mm)	L_2 (mm)	Applicable mounting bolt size
CXSJ□6	5	8.4	M3
CXSJ□10	5	9.5	M3

Be sure to mount the cylinder to the bolt holder. If it is operated without using the bolt holder, the bolt holder may drop.

Piping

⚠ Caution

1. For axial piping, the side port of the standard cylinder is plugged. However, a plugged port can be switched according to the operating conditions. When changing the port position, use the removed plug or a new plug. If reusing the removed plug, apply sealant, etc., before reassembly. If using a new M5 plug, apply a thin layer of grease all the way around the male thread before use. In addition, clear any foreign matter adhered to the port the plug was removed from before piping. After reassembly, be sure to check for air leakage before operating the product.

Plug part no.: (ø6) MTS08-08-P6830
(ø10) CXS10-08-R8601

Stroke Adjustment

⚠ Caution

1. After adjusting the stroke, make sure to tighten the hexagon nut to prevent it from loosening.

Dual-rod cylinders have a bolt to adjust 0 to –5 mm strokes on the retracted end (IN).
Loosen the hexagon nut to adjust the stroke; however, make sure to tighten the hexagon nut after making an adjustment.

2. Never operate a cylinder with its bumper bolt removed. Also, do not attempt to tighten the bumper bolt without using a nut.

If the bumper bolt is removed, the piston hits the head cover causing damage to the cylinder. Therefore, do not use a cylinder without a bumper bolt.
Furthermore, if the bumper bolt is tightened without a nut, the piston seal is caught in the leveled part, damaging the seal.

3. A bumper at the end of the bumper bolt is replaceable.

In case of a missing bumper, or a bumper has a permanent settling, use the right part numbers for ordering.

Bore size (mm)	6, 10, 15	20, 25	32
Part no.	CXS10-34A 28747	CXS20-34A 28749	CXS32-34A 28751
Qty.	1		

Disassembly and Maintenance

⚠ Caution

1. Never use a cylinder with its plate removed.

When removing the hexagon socket head cap screw on the end plate, the piston rod must be secured to prevent from rotating. However, if the sliding parts of the piston rod are scratched and gouged, a malfunction may occur.

2. When disassembling and reassembling the cylinder, contact SMC or refer to the separate operation manual.

⚠ Warning

1. Take precautions when your hands are near the plate and housing.

When the cylinder is operated, take extra precautions to avoid getting your hands and fingers caught between the plate and housing, that can cause a bodily injury.

Operating Environment

⚠ Caution

1. Do not operate the cylinder in a pressurized environment.

The pressurized air may flow inside the cylinder due to its construction.

2. Do not use as a stopper. This may cause malfunction. When using as a stopper, select a stopper cylinder (RS series) or a compact guide cylinder (MGP series).

Speed Adjustment

⚠ Caution

1. When CXSJ□6 is operated at a low speed, adjust the speed with an IN/OUT control by installing two dual speed controllers due to the small cylinder capacity. This can prevent the cylinder from ejecting.

Dual Rod Cylinder

Moisture Control Tube IDK Series

When operating an actuator with a small diameter and a short stroke at a high frequency, the dew condensation (water droplet) may occur inside the piping depending on the conditions. Simply connecting the moisture control tube to the actuator will prevent dew condensation from occurring. For details, refer to **the IDK series in the Best Pneumatics No. 6**.

Standard Stroke

(mm)

Model	Standard stroke	Long stroke
CXS□6	10, 20, 30, 40, 50	60, 70, 75, 80, 90, 100

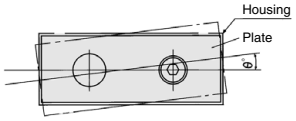
Operating Conditions

Non-rotating Accuracy

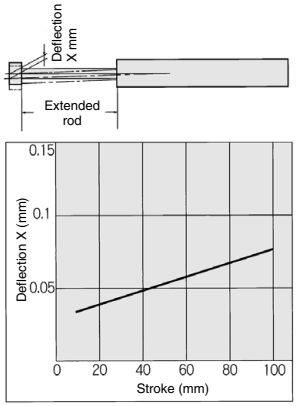
Non-rotating accuracy θ° at the retracted end and without a load should be less than or equal to the value provided in the table below as a guide.



Bore size (mm)	ø6 to ø32
CXSM (Slide bearing)	±0.1°
CXSL (Ball bushing bearing)	

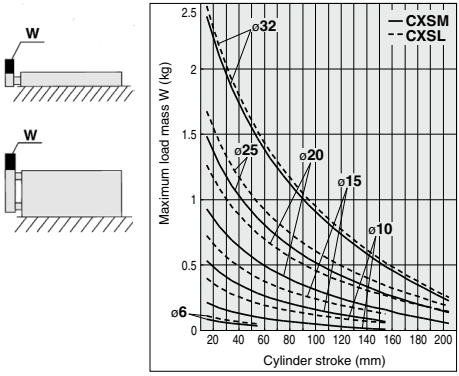
CXS□6 to 32
Deflection at the Plate End

An approximate plate-end deflection X without a load is shown in the graph below.



Maximum Load Mass

When the cylinder is mounted as shown in the diagrams below, the maximum load mass W should not exceed the values illustrated in the graph.



Clean Series

There are two types of cylinders, relieving type and vacuum type, available for a clean room environment. The relieving type specification with the double-seal construction of the rod section allows the cylinder to channel exhaust through the relief port directly to the outside of a clean room environment. The vacuum type specification allows for the application of a vacuum on the rod section while forced exhaust of air takes place through the vacuum port to the outside of a clean room environment.

How to Order

12 – CXS L [Bore size] – [Stroke] – [Auto switch]

- **Ball bushing bearing**

M	Slide bearing
L*	Ball bushing bearing

* 12- series is compatible with the ball bushing bearing type only.

- **Clean room specifications**

10	Relieving type
11	Vacuum type
12	Relieving type (With specially treated sliding parts)

Series Applicable to Operating Environments that Do Not Accept Copper

- Copper (Cu) and Zinc (Zn)-free·····25A- series
- Copper and Fluorine-free·····20- series

* For details, refer to the **Web Catalog**.

Specifications

Bore size (mm)	6	10	15	20	25	32
Proof pressure	1.05 MPa					
Maximum operating pressure	0.7 MPa					
Minimum operating pressure	0.15 MPa	0.1 MPa		0.05 MPa		
Ambient and fluid temperature	–10 to 60°C (No freezing)					
Piston speed	30 to 400 mm/s					
Stroke adjustable range	0 to –5 mm compared to the standard stroke					
Bearing type	Ball bushing bearing					

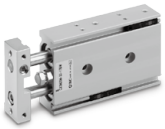
Refer to "Pneumatic Clean Series" catalog (CAT.E02-23) for dimensions.

Cylinder with Stable Lubrication Function (Lube-retainer)

How to Order

CXS [Bearing type] [Bore size] **M** – [Stroke] – [Auto switch]

- **Cylinder with Stable Lubrication Function (Lube-retainer)**



Specifications

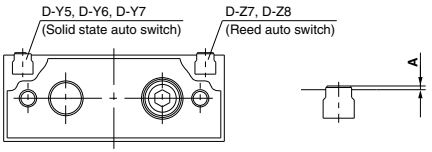
∗ Since this is a guideline including hysteresis, not meant to be guaranteed.
(assuming approximately ±30% dispersion.)
There may be the case it will vary substantially depending on an ambient environment.

Dimensions for Mounting of Auto Switch



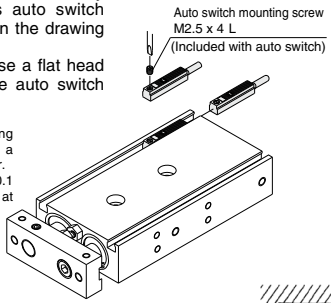
A Dimension

Auto switch model	Bore size (mm)					
	6	10	15	20	25	32
D-Y59A/Y7P/Y59B	0.7	0.2				
D-Y69A/Y7PV/Y69B						
D-Y7NWV/Y7PWV/Y7BWV						
D-Y7NW/Y7PW/Y7BW						
D-Y7BA						
D-Z7, D-Z8	1.2	0.7				

Auto Switch Mounting

When mounting and securing auto switches, they should be inserted into the cylinder's auto switch mounting rail from the direction shown in the drawing below.
After setting in the mounting position, use a flat head watchmaker's screwdriver to tighten the auto switch mounting screw that is included.

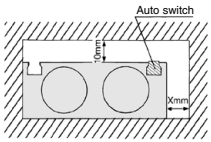
Note) When tightening an auto switch mounting screw, use a watchmakers' screwdriver with a handle of approximately 5 to 6 mm in diameter. Also, tighten with a torque of about 0.05 to 0.1 N·m. As a guide, turn about 90° past the point at which tightening can first be felt.



⚠Caution

1. Avoid proximity to magnetic objects

When magnetic substances such as iron (including flange brackets) are in close proximity to a cylinder body with an auto switch, be sure to provide a clearance between the magnetic substance and the cylinder body as shown in the drawing below. If the clearance is less than the values noted in the table below, the auto switch may not function properly.



Bore size	X (mm)
ø6	0
ø10	0
ø15	10
ø20	10
ø25	0
ø32	0

Other than the applicable auto switches listed in "How to Order", the following auto switches can be mounted.
For detailed specifications, refer to pages 1119 to 1245.

∗ Normally closed (NC = b contact), solid state auto switch (D-Y7G/Y7H type) are also available. For details, refer to page 1139.

Made to Order: Individual Specifications

Please contact SMC for detailed dimensions, specifications and lead times.

Note 1) Unless indicated otherwise, the dimensional tolerance conforms to the ordinary dimensional difference (matching) per JIS B 0405.
Note 2) Piston rod A and B must be extended in order to install a plate. Apply presure (0.2 MPa or more) from the supply port of the extended end when installing a plate.
To secure the plate to the rods, attach it first to piston rod B, and then to piston rod A. Make sure to apply Loctite to the threaded portion.
After anchoring the plate, operate the cylinder to check for proper operation (e.g., the cylinder operates smoothly when moved by hand or at least operates properly at the minimum operating pressure).

CXS Series
Specific Product Precautions

Be sure to read this before handling the products.
Refer to back page 50 for Safety Instructions and pages 3 to 12 for Actuator and Auto Switch Precautions.

Mounting

⚠Caution

1. Make sure that the surface on which the cylinder is to be mounted is flat (reference value for flatness: 0.05 or less).
Dual rod cylinders can be mounted from 3 directions, however, make sure that the surface on which the cylinder is to be mounted is flat (reference value for flatness: 0.05 or less). Otherwise, the accuracy of the piston rod operation is not achieved, and malfunctioning can occur.

2. Piston rod must be retracted when mounting the cylinder.
Scratches or gouges in the piston rod may lead to damaged bearings and seals and cause malfunctions or air leakage.

Piping

⚠Caution

1. Plug the appropriate supply port(s) according to the operating conditions.
Dual-rod cylinders have 2 supply ports for each operating direction (3 supply ports for ø6 only). Plug the appropriate supply port according to the operating conditions. When changing the port position, use the removed plug or a new plug. If reusing the removed plug, apply sealant, etc., before reassembly. If using a new M5 plug, apply a thin layer of grease all the way around the male thread before use. In addition, clear any foreign matter adhered to the port the plug was removed from before piping.

After reassembly, be sure to check for air leakage before operating the product.

(ø25 to ø32)CYP025-08B29449(Rc 1/8)
CXS25-08-A3025A(NPT 1/8)
CXS25-08-A3911(G 1/8)

Stroke Adjustment

⚠Caution

1. After adjusting the stroke, make sure to tighten the hexagon nut to prevent it from loosening.
Dual rod cylinders have a bolt to adjust 0 to –5 mm strokes on the retracted end (IN).
Loosen the hexagon nut to adjust the stroke; however, make sure to tighten the hexagon nut after making an adjustment.

2. Never operate a cylinder with its bumper bolt removed. Also, do not attempt to tighten the bumper bolt without using a nut.
If the bumper bolt is removed, the piston hits the head cover causing damage to the cylinder. Therefore, do not use a cylinder without a bumper bolt.
Furthermore, if the bumper bolt is tightened without a nut, the piston seal is caught in the leveled part, damaging the seal.

Stroke Adjustment

⚠Caution

3. A bumper at the end of the bumper bolt is replaceable.
In case a missing bumper, or a bumper has a permanent settling, use following part numbers for ordering.

Bore size (mm)	6, 10, 15	20, 25	32
Part no.	CXS10-34A 28747	CXS20-34A 28749	CXS32-34A 28751
Qty.	1		

Disassembly and Maintenance

⚠Caution

1. Never use a cylinder with its plate removed.
When removing the hexagon socket head cap screw on the end plate, the piston rod must be secured to prevent from rotating. However, if the sliding parts of the piston rod are scratched and gouged, a malfunction may occur. If the plate is not required for your application, use the cylinder that does not come with a plate, available through made-to-order (-X593) on page 759.

2. When disassembling and reassembling the cylinder, please contact SMC or refer to the separate operation manual.

⚠Warning

1. Take precautions when your hands are near the plate and housing.
Take sufficient care to avoid getting your hands or fingers caught when the cylinder is operated.

Operating Environment

⚠Caution

1. Do not operate the cylinder in a pressurized environment.
The pressurized air may flow inside the cylinder due to its construction.

2. Do not use as a stopper. This may cause malfunction. When using as a stopper, select a stopper cylinder (RS series) or a compact guide cylinder (MGP series).

Speed Adjustment

⚠Caution

1. When CXS□6 is operated at a low speed, adjust the speed with an IN/OUT control by installing two dual speed controllers due to the small cylinder capacity. This can prevent the cylinder from ejecting.

Dual Rod Cylinder With Air Cushion

CXS Series

							—	Y7BA∗∗	—	●	○	○		
Reed auto switch	—	Grommet	Yes	3-wire (NPN equivalent)	—	5 V	—	—	Z76	●	●	—	—	IC circuit	—
			None	2-wire	24 V	12 V	100 V	—	Z73	●	●	●	—	—	Relay, PLC
							100 V or less	—	Z80	●	●	—	—	IC circuit	

∗∗ Water resistant type auto switches can be mounted on the above models, but in such case SMC cannot guarantee water resistance. Consult with SMC regarding water resistant types with the above model numbers.

∗ Lead wire length symbols: 0.5 m ····· Nil (Example) Y59A
3 m ····· L (Example) Y59AL
5 m ····· Z (Example) Y59AZ

∗ Solid state auto switches marked with "○" are produced upon receipt of order.

• Since there are other applicable auto switches than listed, refer to page 758 for details.
• For details about auto switches with pre-wired connector, refer to pages 1192 and 1193.
• Auto switches are shipped together (not assembled).

Moisture Control Tube IDK Series

When operating an actuator with a small diameter and a short stroke at a high frequency, the dew condensation (water droplet) may occur inside the piping depending on the conditions.
Simply connecting the moisture control tube to the actuator will prevent dew condensation from occurring. For details, refer to the IDK series in the Best Pneumatics No. 6.

⚠ Precautions

Be sure to read this before handling the products.
Refer to back page 50 for Safety Instructions and pages 3 to 12 for Actuator and Auto Switch Precautions.

Selection

⚠ Caution

1. Operate the cylinder until the stroke end.
If the stroke is restricted by the external stopper and clamp workpiece, effective cushioning and noise reduction will not be achieved.

2. Adjust the cushion needles to absorb the kinetic energy during the cushion stroke so that excessive kinitic energy does not remain when the piston reaches the stroke end.
If the piston reaches the stroke end with excessive kinetic energy remaining (more than the values given in table (1) below) due to an improper adjustment, excessive impact will occur, causing damage to machinery.

Table (1) Allowable Value at Piston Impact

Bore size (mm)	20	25	32
Piston speed (mm/s)	50 to 700	50 to 600	50 to 600
Kinetic energy (J)	0.17	0.27	0.32

Cushion Needle Adjustment

⚠ Caution

1. Keep the adjusting range for the cushion needle between the fully closed position and the rotations shown below.

Bore size (mm)	20	25	32
Rotations	2.5 rotations or less		3 rotations or less

Use a 3 mm flat head watchmakers screwdriver to adjust the cushion needles to the fully closed position, as this will cause damage to the seals. The adjusting range for the cushion needles must be between the fully closed position and the open position ranges indicated in the table above. A retaining mechanism prevents the cushion needles from slipping out; however, they may spring out during operation if they are rotated beyond the ranges shown above.

Precautions for selection standard, mounting, piping, and operating environment are same as for the standard series.

Specifications

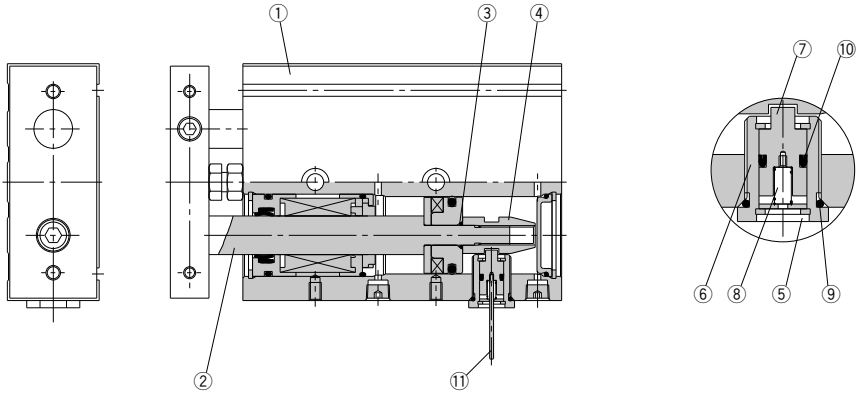
Moisture Control Tube IDK Series

When operating an actuator with a small diameter and a short stroke at a high frequency, the dew condensation (water droplet) may occur inside the piping depending on the conditions.
Simply connecting the moisture control tube to the actuator will prevent dew condensation from occurring. For details, refer to **the IDK series in the Best Pneumatics No. 6**.

Construction



Component Parts

No.	Description	Material	Note
1	**Housing**	Aluminum alloy	Hard anodized
2	**Piston rod B**	Carbon steel	Hard chrome plated
3	**O-ring**	NBR	
4	**Lock rod**	Special steel	
5	**Retaining ring**	Special steel	
6	**Lock holder**	Aluminum alloy	
7	**Lock pin**	Special steel	
8	**Lock spring**	Piano wire	
9	**O-ring**	NBR	
10	**Rod seal**	NBR	
11	**Manual lever**	Special steel	

∗ Parts other than those listed above are the same as those for standard type.

Replacement Parts/Seal Kit

Bore size (mm)	Kit no.	Contents
6	CXSRM6-PS	Includes the kit components of the seal kit featured on page 754 plus items ⑨ and ⑩ from the parts list above.
	CXSRL6APS

Note) Adjust the auto switch after confirming the operating conditions in the actual setting.

As for auto switch mounting dimensions, auto switch mounting method and its operating range, those are the same as basic type. Refer to page 758.

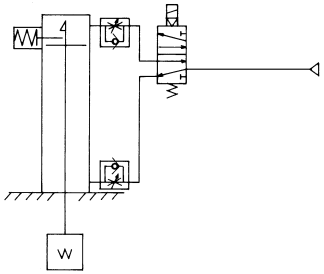
CXS Series
With End Lock for Retraction Side
Specific Product Precautions

Be sure to read this before handling the products.
Refer to back page 50 for Safety Instructions and pages 3 to 12 for Actuator and Auto Switch Precautions.

Recommended Pneumatic Circuit

⚠Caution

●This is necessary for the proper operation and release of the lock.



Handling Precautions

⚠Caution

1. **Do not use 3 position solenoid valves.**
   Avoid using in combination with 3 position solenoid valves (especially closed center metal seal types). If pressure is trapped in the port on the head side, the cylinder cannot be locked. Even after being locked, the lock may be released after some time, due to air leakage from the solenoid valve entering the cylinder.
2. **Back pressure is required to release the end lock.**
   Be sure that air is supplied to the rod side before starting operation, as shown in the drawing on the left. The lock may not be released. (➲Refer to the section on releasing the lock.)
3. **Release the lock when mounting and adjusting the cylinder.**
   An attempt to mount or adjust a cylinder while it is locked can damage the lock.
4. **Operate with a load ratio of 50% or less.**
   If the load ratio exceeds 50%, this may cause problems such as failure of the lock to release, or damage to the lock unit.
5. **Do not operate multiple cylinders in synchronization.**
   Avoid applications in which two or more end lock cylinders are synchronized to move one workpiece, as one of the cylinder locks may not be able to release when required.
6. **Install speed controllers as they will be meter-out control.**
   When they are used under meter-in control, the lock may not be released.
7. **Never adjust the retracting stroke using a bumper bolt or external stopper. The lock will not function.**

Operating Pressure

⚠Caution

1. Apply a pressure more than 0.3 MPa to the port on the head side. The pressure is necessary to release the lock.

Exhaust Speed

⚠Caution

1. Locking will occur automatically if the pressure applied to the port on the head side falls to 0.05 MPa or less. In cases where the piping on the head side is long and thin, or the speed controller is separated at some distance from the cylinder port, the exhaust speed will be reduced. Note that some time may be required for the lock to engage. In addition, clogging of a silencer mounted on the solenoid valve exhaust port can produce the same effect.

Releasing the lock

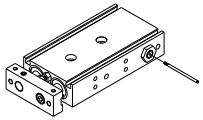
⚠Warning

1. Before releasing the lock, be sure to supply air to the rod side, so that there is no load applied to the lock mechanism when it is released. (Refer to the Recommended Pneumatic Circuit.) If the lock is released when the rod side is in an exhaust state, and with a load applied to the lock unit, the lock unit may be subjected to an excessive force and be damaged. Furthermore, sudden movement of the slide table is extremely dangerous.

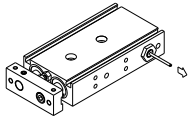
Manual Release

Manual release (Non-locking type)

1. Insert the manual lever and screw it into the lock holder assembly. If the lever is screwed in sidelong, it may damage the lock spring.



2. To unlock, pull the manual lever in the direction of the arrow. Release the manual lever to return the cylinder to a ready-to-lock state.



3. The manual lever (ø1.6 x 35 L, tip part: M1.6 x 0.35 x 3 L) is included with the cylinder. If additional manual levers are required, use the following part number to place an order: CXS06-48BK2777 (for all series).

⚠Caution

Do not use the cylinder while the manual lever is screwed in. It may damage the lock mechanism.

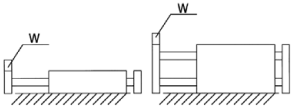
Moisture Control Tube IDK Series

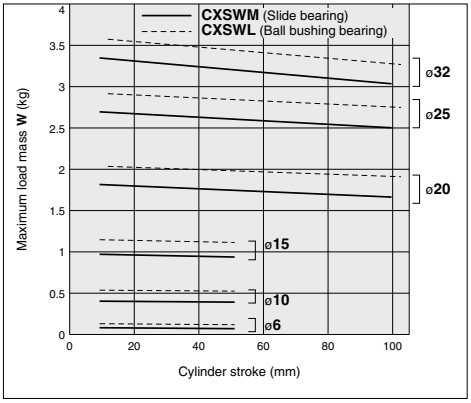
When operating an actuator with a small diameter and a short stroke at a high frequency, the dew condensation (water droplet) may occur inside the piping depending on the conditions.
Simply connecting the moisture control tube to the actuator will prevent dew condensation from occurring. For details, refer to **the IDK series in the Best Pneumatics No. 6**.

Operating Conditions

Maximum Load Mass

When the cylinder is mounted as shown in the diagrams below, the maximum load mass W should not exceed the values illustrated in the graph immediately following the diagrams.

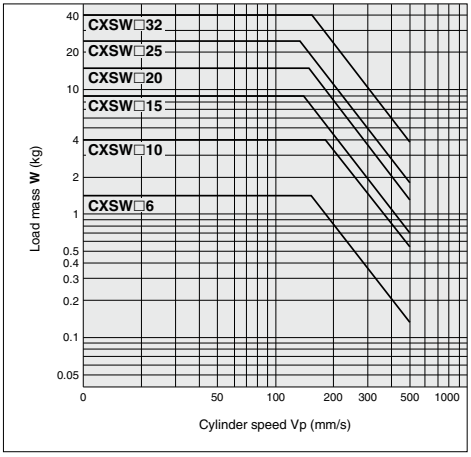




Note) Please consult with SMC regarding the maximum load mass for long strokes depending on your specific usage conditions.

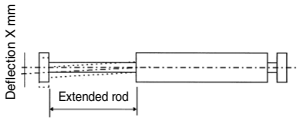
Allowable Kinetic Energy

Operate a vertically mounted cylinder with a load mass and cylinder speed not exceeding the ranges shown in the graph below. A horizontally mounted cylinder should also be operated with a load weight less than the ranges given in the graph at left. Cylinder speed should be adjusted using a speed controller.



Deflection at the Plate End

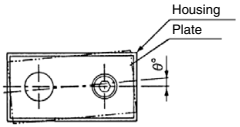
An approximate plate-end deflection X without a load is shown in the table below.



Bore size (mm)	6 to 32
CXSWM (Slide bearing)	±0.03 mm
CXSWL (Ball bushing bearing)	

Non-rotating accuracy

Non-rotating accuracy θ° without a load should be less than or equal to the value provided in the table below as a guide.



Bore size (mm)	6 to 32
CXSWM (Slide bearing)	±0.1°
CXSWL (Ball bushing bearing)
